

Customer Transaction & Disbursement Insights Summary

Senior Data Analyst Case Submission

02/05/2025

Summary & Tools

- Key types of data analyzed (transactions, customer info)
- Tools and techniques used
 - Matplotlib & Seaborn for visualizations
 - Python 3.9+ for ETL scripting and analysis
 - PostgreSQL as the target data warehouse
 - psycopg2 for PostgreSQL integration
 - pandas for data cleaning and transformation

Key Findings

A. Disbursement Trends

- Total disbursement volume across all regions: **2,217,030 RWF**
- Highest disbursing region: **East Region**
- Peak periods: **JAN-16**

B. Customer Behavior

- Average transaction amount: **9,897.46 RWF**
- Consistent high-volume customers: **Customer_ID 100156, 100215**

C. Regional Patterns

- Region **East** shows higher average disbursements but fewer transactions
- Region **Mvk** has more customers but lower disbursement per capital

Disbursement by Region
